

The captifyContent module is a slick new way to display the images attached to your Joomla sections, Joomla categories, Joomla content, k2 Categories or K2 content items on your Joomla site in a grid based layout.

The module resizes the image that you have assigned to the section, category, content or K2 item, lays it out in a simple grid. You can select whether or not to display the item title in a jQuery driven sliding or fading overlay or display the item title below the image.

For more information please visit the [captifyContent documentation page](#) .

Features

Demonstration

{loadposition captify}

Requirements

- Joomla 1.5
- JB Library Plugin
